

Replacement of the Logo Cover on the Mark V

This Kit contains all the parts that you will need to install a logo cover onto your headstock. The logo cover is located on the side of the headstock opposite the speed dial and switch, as seen in Figure 1. It covers the hole which gives you access to the internal workings of the headstock.

If you have a logo cover that needs replaced, you must first remove the old one. Follow these steps for replacing the logo cover on your Mark V.

Tools needed:

- Medium Phillips screwdriver
- Medium screwdriver
- 3/8" Socket

WARNING

Turn off and unplug the MARK V before proceeding with any steps below.

1. With a medium Phillips screwdriver, loosen and remove the screw in the bottom of the logo cover. See Fig. 2.

2. Pivot the cover upward 180 degrees and out of the way.

3. Place the blade of a medium screwdriver between the push nut and the inside back surface of the headstock casting, as seen in Fig. 3. By twisting the tip of the screwdriver, force the push nut off of the pivot pin.

NOTE

Be careful not to allow the push nut to drop inside the headstock. Small parts could disrupt normal operation of mechanical parts resulting in damage to the unit.

4. Pull out the pivot pin and remove the logo cover.

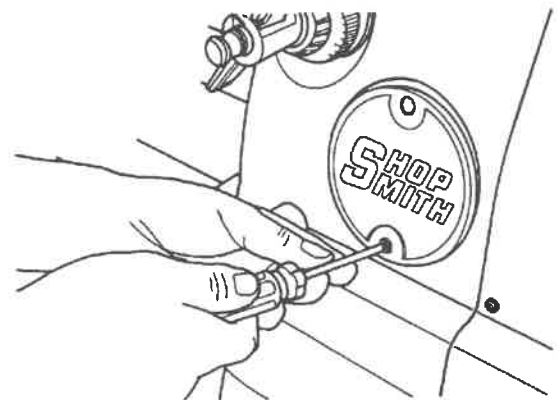

Fig. 2

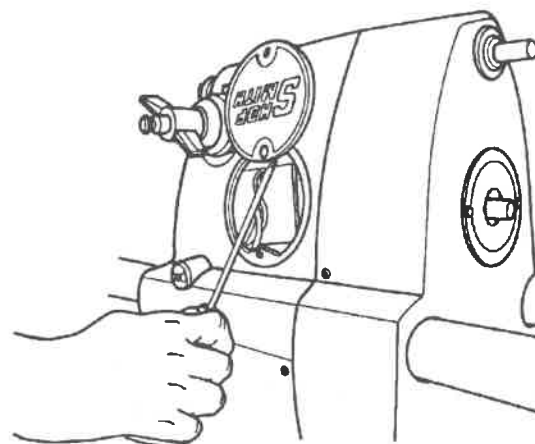

Fig. 3

5. To install the logo cover, place the cover upside down 180° while aligning the pivot pin hole with the hole in the headstock casting. Insert pivot pin through the cover and casting. See Fig. 4.

6. Reach in and start the replacement push nut onto the back end of the replacement pin. See Fig. 5.

7. Use a 3/8" socket to push the push nut completely onto the pivot pin until it is completely seated. See Fig. 6.

NOTE

Always use new pivot pins and push nuts. Using old pivot pins and push nuts could result in parts that will not hold as well as new parts.

8. Rotate the logo cover back down 180° and install the Phillips screw securely.
